# **HOW TO RUN ON LOCALLY:**

- 1. Create a folder as any name.
- 2. Open that folder in any code editor (vs code).
- 3. Open terminal (  $ctrl + \sim$  ) on code editor.
- 4. Type this code to get code locally.

git clone <a href="https://github.com/20NN1A05F1/crud.git">https://github.com/20NN1A05F1/crud.git</a>

- 5. Now move to crud folder (cd crud in terminal)
- 6. Ignore client folder.
- 7. Here crud is root folder.
- 8. In root folder create a .env file and create a PORT and CONN\_STR variables and assign value.
- ex: PORT = 3000 (commonly any number between 3000 8080).

  CONN\_STR = your mongodb\_connection\_string.

--- trouble in above process ?:

simply paste this code in .env file .

PORT = 5000

CONN\_STR=mongodb+srv://20NN1A05F1:rough@cluster0.wbclvtg.mongodb.net /?retryWrites=true&w=majority&appName=Cluster0

9. After in terminal (in crud folder as root folder) type this command to run server.

npm i (installing all dependencies)

npm run dev (to run server)

10. if you get below message in terminal then your server will running successfully.

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000

```

# route and its functionality:

For this use any API using tools like Postman or Thunder Client.

i use THUNDER CLIENT.

### **CREATE ROUTE:**

1. This route is used to create a new employee in database with a below fields.

username, empname, email, role, salary

2. in thunder client click on new request and select this options method as post

url as http://localhost:5000/api/user/create

pass this json data as a body as your required value.

```
{
"username": "jack",
"empname": "jack rider",
"email": "jack@gmail.com",
"role": "Front End Developer",
"salary": 60000
}
```

3. finally press send to insert data in mongodb data base and get a inserted

data as a response.

4. If user is already in db it will return User is already exist as response.

for more details visit below output images...

#### **READONE:**

1. This route is used to read specific user info by passing that user id as a param.

method as get

url as

http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca

2. After sending you will get that specific user details as response.

#### **READALL:**

1 . Read all route is used to get all the user data existing in the mongodb data base .

method as get

url as http://localhost:5000/api/user/readall

2. After sending you will get that all user details as response.

#### **UPDATE:**

1. This route is used to update specific user by passing that user id as a param.

method as put

url as

http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca

2. After sending you will get updated user details as response.

#### **DELETE:**

1. This route is used to delete specific user by passing that user id as a param.

method as delete

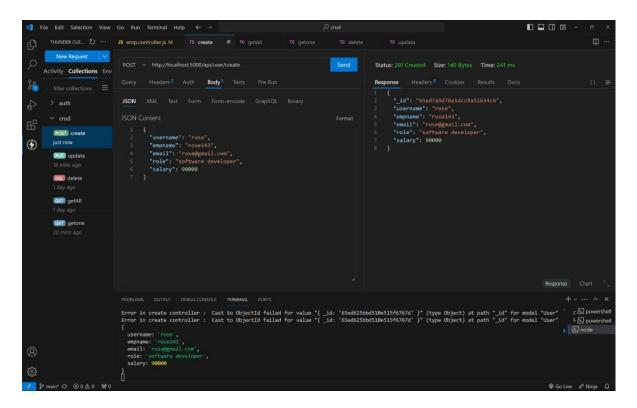

url as

http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca

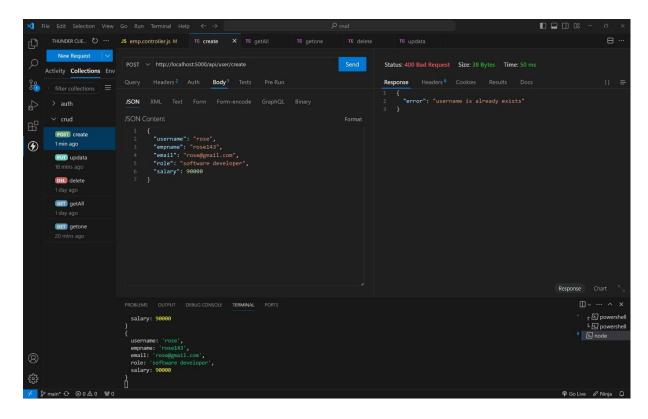

2. After sending you will deleted successfully as response.
